

Appl. No. : 10/661,853
Filed : September 12, 2003

IN THE SPECIFICATION:

Please amend the following paragraphs as indicated:

[0095] Advantageously, the configuration of the gaming machine permits the machine to have a slant top configuration but at the same time have substantially reduced dimensions compared to other slant type gaming machines. In one embodiment, the configuration permits the depth of the machine (from the front of the bumper to the rear wall) to be less than the depth of the machine (from side-to-side) in a similar fashion to gaming machines disclosed in U.S. Patent Application Serial No. 10/253,151, now U.S. Patent No. 6,860,814 ~~10/253,621~~. In one embodiment, the gaming machine is about twenty-six (26) inches in depth and about twenty-eight (28) inches in width.

[0102] As described above, various features of the invention may be applied to gaming machines having other configurations. For example, the rotating or “flip down” bezel and display configuration may be applied to an upright gaming machine, such as of the type illustrated in U.S. Patent Application Serial No. 10/621,740 ~~10/253,621~~ incorporated herein in its entirety by reference. That application illustrates an upright type gaming machine in which a display is mounted to a door thereof. In accordance with the invention, the display of the upright gaming machine may be mounted for rotation relative to the door, permitting access to the interior of the gaming machine

through an opening in the door at which the display is mounted. Of course, the display may be mounted behind a bezel which moves separately or with the display.
